

Polyolefins and Base Chemicals

INFORMATION ON THE USE COMMUNICATION FOR NON-HAZARDOUS PRODUCTS

The Regulation (EC) No 1907/2006 of the European Parliament and of the Council (**REACH**) requires the communication for identifying uses of substances in the supply chain from the Manufacturers / Importers to the end users. The uses will be assigned and communicated in a standardised format, the ECHA Use Descriptor System.

The identified uses are the basis for the **Exposure Assessment** of the Chemical Safety Report. The assessment of the substance exposure is however only required for hazardous substances and mixtures in accordance with the **CLP Regulation** (Regulation (EC) No 1272/2008), as well as for PBT and vPvB substances¹.

For non-hazardous substances there is no obligation to identify uses along the supply chain. The majority of our products are classified as non-hazardous and are not assessed as PBT or vPvB. Therefore no communication of uses needs to be performed.

For products, which require an Exposure Assessment, we are in direct contact with customers to discuss a valid Use Descriptor Set.

¹ PBT: persistent, bioaccumulative and toxic; vPvB: very persistent and very bioaccumulative
