# We help you excel in mobility

## Reduce weight

### Innovating for lightweight solutions

Borealis strives for sustainable mobility by innovating to reduce vehicle weight and enhance its energy efficiency. We collaborate with OEMs, TIERS, and value chain partners to deliver tangible benefits to the industry, drivers, passengers, and the environment. Our cutting-edge innovation comes with unparalleled quality control assurance.

## Improve sustainability

### Promoting circular economy solutions

Polyolefins provide a lower environmental footprint compared to many conventional materials. Recognizing that plastics are too valuable to waste, Borealis drives the transition to a circular economy for plastics with our advanced mechanical recycled Borcycle™ M, chemical recycled Borcycle™ C, and bio-sourced Bornewables™. They focus on recycling post-consumer waste, reducing CO<sub>2</sub> emissions, and decoupling from fossil-based feedstocks while maintaining high-performance standards.

## Save costs

### Delivering cost-efficient high-performance alternatives

The polypropylene (PP) compound solutions offered by Borealis and Borouge are cost-efficient and high-performance alternatives to conventional metal and engineering plastics. Our tailor-made materials are easy to process, even in complex geometries and surface textures. Enabling design freedom and highly functional parts across a wide range of process parameters. They create robust surfaces with excellent aesthetics, paintability, and high scratch resistance.

## Access globally

### Growing global footprint and local presence

With operations in over 120 countries, the Borealis and Borouge footprint is truly global. Our presence on the ground enables us to provide dedicated support to automotive OEMs and Tiers all over the world. Highly skilled and experienced teams in our development centers and operations in Europe, the Americas, and Asia are re-inventing plastics for sustainable mobility.

# Borealis Interior Solutions for Mobility

## Dedicated to Sustainable Mobility

Mobility is a core business segment at Borealis. We apply our specialist knowledge and decades of experience to develop innovative and sustainable polypropylene (PP) and thermoplastic polyolefin (TPO) solutions for a wide range of interior applications, including dashboards, door panels, center consoles, trims, and structural components.

Our comprehensive range of PP and TPO polymers and compounds have precisely balanced and tailored properties to match the specific needs of the automotive industry. They add value by helping manufacturers lower system costs while at the same time maintain the highest performance standards. Crucially, these materials help reduce the amount of material and energy inputs required – a significant boost for sustainability.

The newest additions to the Daplen™, Fibremod™ and Borcycle™ grade portfolios boast the lowest densities in combination with excellent surface aesthetics and high purity. These key features help reduce the material mix in interior applications and increase circularity in the industry.

# Powered by Innovation

With the steady electrification of the power train and introduction of new mobility solutions, the vehicle interior has become a decisive factor in establishing brand image. The quality of a vehicle is often evaluated on the basis of initial sensory influences – look, touch, and smell. This is why our resins and compounds are developed to ensure a favorable perception of quality, and a comfortable driving experience. They offer ample design freedom to fulfill aesthetic objectives, enabling low gloss, scratch resistant interior trims, and stylish yet robust cladding. On top of pleasing optics and haptics, our material solutions also reduce emissions and odor, and offer non-fogging and sound dampening characteristics.

### High purity

- Neutral odor
- Low volatiles
- Fogging

### Surface quality

- Scratch resistance
- A-Class surface
- Low gloss
- Haptics

### Physical Properties

- High stiffness
- Good impact strength
- Low density

### Easy Processing

- High flowability
- Wide process window
- Shrinkage

### Achieving flawless surfaces

Borealis has launched a number of new grades which offer flow mark-free performance. The innovative and proprietary PP resin on which these grades are based enables the avoidance of flow marks for applications across a very broad processing window.

This allows our customers to increase production output without any compromise in surface quality.

### Proven color expertise

Whether the interior of a vehicle is perceived to be aesthetically pleasing often depends on color: the impression color makes overall, but also whether color is harmonious and consistent across the various interior parts.

Building on decades of experience in the development of colors and the production of in-mass colored PP and TPO compounds, Borealis offers a range of ready-to-use materials, from very bright to dark, and special effect colors such as metallic. Our production facilities follow the highest quality standards in producing color variations within the narrowest tolerances. We guarantee that every batch is produced in accordance with the respective OEM's color requirements. Borealis production is subject to stringent quality control measures.

### Durability and good optics

Maintaining the pleasing look and feel over time of interior components such as dashboards, inner door panels, and pillar trims requires scratch resistant materials that protect against abrasion and marring. Our material solutions for interior applications have been developed specifically to deliver improved grain effect in combination with superior resistance to scratching. Ongoing co-operation with our value chain partners enables us to stay abreast of the most current surface design trends.

### Emissions and odors under control

Borealis laboratories are equipped with state-of-the-art infrastructure for emissions and fogging testing. Our own odor testing panel is accredited in accordance with current industry standards. The extended quality control in our own production plants also conducts emission testing. Whether using 100% virgin polymer, or a combination of virgin and post-consumer recycle (PCR) in the formulation, these tools ensure the high

### State-of-the-art modeling & simulation support

Starting in the early project phases, our CAED experts use advanced material characterisation techniques and state-of-the-art modeling and simulation tools to optimize part design, evaluate tooling concepts, define processing conditions, and simulate part behaviour under various loads. This reduces development time for new parts and ensures efficient and stable production processes for our customers.

## Reduce weight

The comprehensive Borealis portfolio of Daplen™ mineral-filled TPO compounds encompasses a wide range of automotive industry standards. With material densities ranging from 0.90 to 1.04 g/cm<sup>3</sup>, Daplen™ PP compounds deliver maximum performance at the lowest possible weight. These low-density materials combine excellent aesthetics, purity, and well-balanced mechanical properties to produce automotive parts of high quality. The broad processing window of Daplen™ resins enables the one-shot manufacturing of interior parts with sophisticated designs, complex geometries, and pleasing surface textures.

### Daplen™ EG066AI

Daplen™ EG066AI is an elastomer modified PP intended for use in door panel and pillar trim applications. It offers an excellent balance between impact strength and stiffness at lowest possible material density and is available with 75% renewable-based or chemically recycled polymer content by weight.

- High fluidity enables complex part designs
- Premium surface aspect performance
- Lowest material density

### Daplen™ EE001AI

Daplen™ EE001AI is a 7% mineral-filled elastomer modified PP compound intended for injection molding. It features an excellent balance between impact strength and stiffness and offers good surface quality and high purity. EE001AI is available in various OEM colors as well as a natural version for self-coloring.

- Easy processing
- High-end surface appearance
- Excellent scratch resistance with no tackiness

The material can be provided with 50% renewable-based or chemically recycled polymer content by weight.

### Daplen™ EF098HP

Daplen™ EF098HP is a 10% mineral-filled PP compound with high purity for premium surface appearance. Designed for use in door panels, center consoles, window frames, and tailgate cladding applications, it is available in OEM colors and as a natural version for self-coloring.

- Fulfills most stringent VOC, FOG and odor specifications
- Superior surface aesthetics
- High scratch resistance

The material can be provided with 50% renewable-bases or chemically recycled polymer content by weight.

## Save costs

Fibremod™ glass fiber reinforced PP compounds are a cost efficient and high-performance alternative to conventional metal-based materials, and are particularly suited for structural interior applications such as instrument panel carriers, door modules, and tailgate frames. Fibremod resins offer the required strength and durability for complex parts; their easy processability also gives Tier Ones and OEMs greater design freedom. Using Fibremod makes it easier to integrate more functionalities into one part. This reduces the complexity of both the part and assembly, thus saving system costs.

### Fibremod™ GE277AI

Fibremod™ GE277AI is a 20% chemically coupled, high flow fiber reinforced PP compound which allows for the production of complex part geometries in standard and foam injection molding processes.

The material can be provided with 50% renewable-based or chemically recycled polymer content by weight.

- Enables high flow lengths and low wall thickness
- Easy to weld using different welding technologies
- Results in good foam structure and homogeneous cell sizes in foam injection molding technology

### Fibremod™ GB416LF

Fibremod™ GB416LF is a 40% long glass fiber reinforced PP that exhibits outstanding mechanical properties such as high strength and excellent impact behaviour. It has been further optimized to allow for the production of visible structural parts with pleasing aesthetics, high scratch and mar resistance, as well as low emission and fogging levels

GB416LF can be provided with 50% renewable-based or chemically recycled polymer content by weight.

- Allows for filling of complex parts with low injection pressure
- Makes aesthetic trims redundant, thus reducing complexity
- Ready-to-use mass-colored material meets narrow OEM color tolerances on final injection molded part surface

### Fibremod™ GB601HP + EE002AE

Fibremod™ GB601HP a 60% long glass fiber reinforced PP compound can be diluted with Daplen™ EE002AE, a high impact strength PP resin to produce highly functional structural parts. This combination is suitable for conventional injection molding and foam injection molding process.

EE002AE can be provided with 75% renewable-based or chemically recycled polymer content by weight

- Weight reduction
- Lower system costs
- Very good dimensional stability
- Dilution process enhances flexibility

# Improve sustainability

Whether for interior, exterior, electric powertrain, or UTB: Borealis and Borouge offer a range of more sustainable mineral-filled and glass fiber reinforced solutions. These enable the use of higher amounts of recyclate in the respective part; produce more easily recyclable applications; and enable the substitution of circular materials for conventional polyolefins, thereby enhancing the environmental footprint of the final product.

## Mineral-filled polypropylene (PP) compounds with post-consumer recycled polymer content

### Borcycle™ EE1300SY

Borcycle™ EE1300SY is a 15% mineral-filled PP compound containing 30% PCR content by weight. Offering an excellent balance between impact strength and stiffness, EE1300SY is used to manufacture parts with outstanding optics as well as excellent scratch and mar resistance. It is validated according to the relevant OEM standards and meets stringent emissions, fogging and odor specifications. EE1300SY is available in standard dark to bright OEM colors.

- 30% PCR content by weight
- Enables CO<sub>2</sub> footprint reduction
- Easy processing
- OEM validated

### Borcycle™ MG1416SY

Borcycle™ MG1416SY is a 10% mineral-filled PP compound containing 40% PCR polymer. It is designed to match OEM requirements for aesthetic interior applications like pillar trims or trunk claddings.

MG1416SY is available in standard dark to bright OEM colors.

- 40% PCR content by weight
- Lower CO<sub>2</sub> footprint compared to virgin material solutions
- Fulfills high aesthetic quality requirements
- Good flowability

## Glass fiber reinforced PP compounds with post-consumer recycled polymer content

### Borcycle™ GE2331SY

Borcycle™ GE2331SY is a 20% glass fiber reinforced PP compound containing 40% PCR. Intended for use in injection molding of non-visible interior parts like instrument panel or center console carriers, GE2331SY fulfills premium OEM emissions, fogging, and odor requirements.

- 40% PCR content by weight
- Near-virgin performance properties
- Good flowability enables complex part geometries
- Suitable for foam injection molding

### Borcycle™ GD3600SY

Borcycle™ GD3600SY is a 30% glass fiber reinforced PP compound containing nearly 70% PCR polymer. Intended for use in injection molding of non-visible parts like center console carriers, GD3600SY offers an excellent stiffness/impact balance while maximizing the use of recycled polymers.

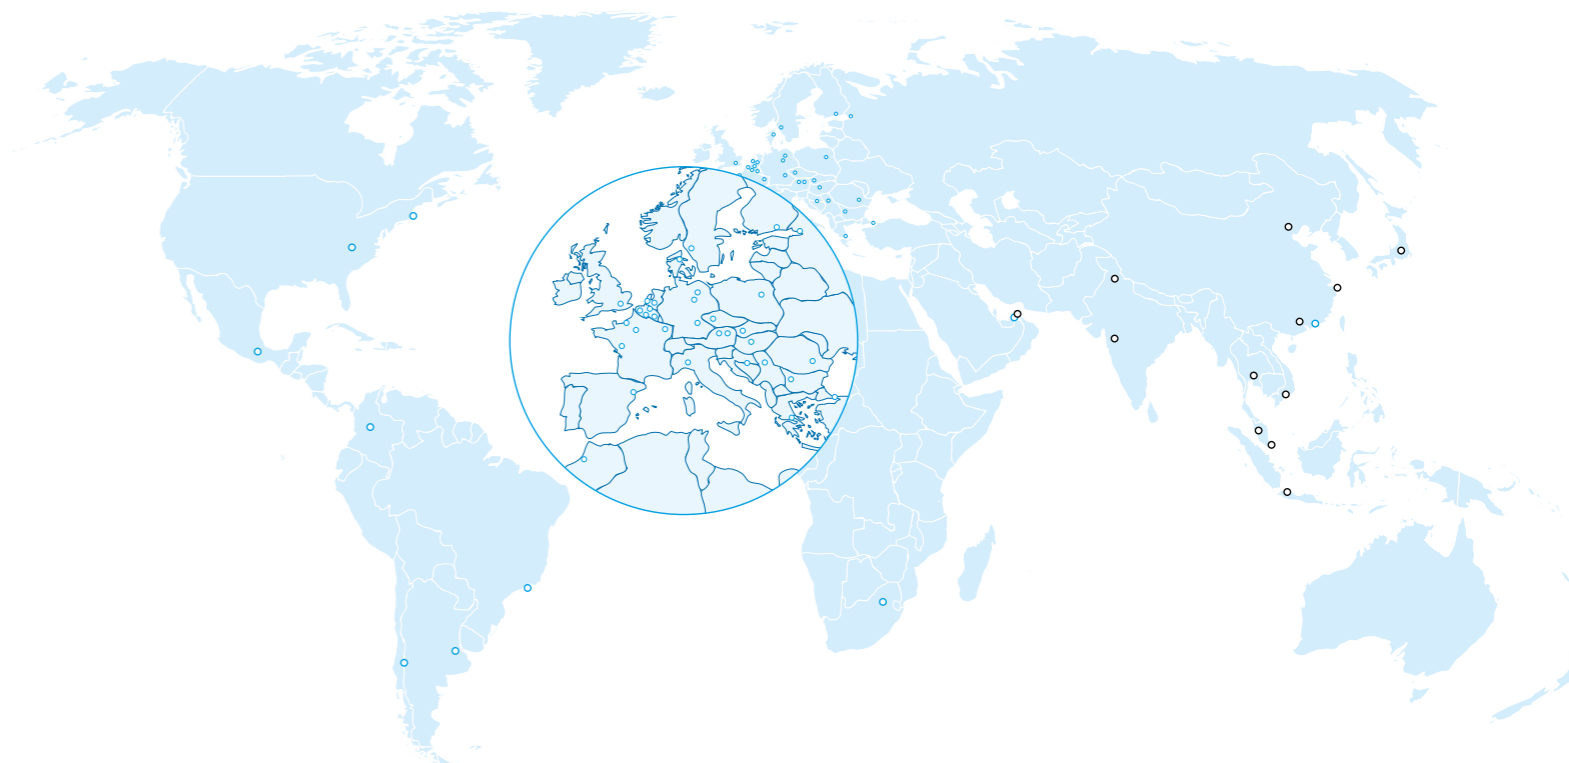

- 68% PCR content by weight
- Good flowability
- Good impact behaviour

# Access globally

In re-inventing essentials for sustainable living, we are building on our commitment to safety, our people, innovation and technology, and performance excellence. We are accelerating the transformation to a circular economy of polyolefins and expanding our geographical footprint to better serve our customers around the globe.

With operations and development centers in the Americas, Europe, Middle East and Asia, we are close to where you are. Offering both, global solutions with aligned performance across regions, and solutions that are tailor made to the specifics of local markets.

# Circular Economy Solutions for Mobility

## Join the circular revolution!

We can work together to make mobility more circular. Our ever-expanding range of circular material solutions can help you meet your own sustainability targets – without having to compromise on quality or performance.

### Choose material solutions based on circular or renewable feedstock instead of fossil fuel-based feedstock.

As reliable partners, Borealis and Borouge are putting their expertise to work to ensure the secure and ample supply of high-quality circular materials on the market. We are committed to increasing the volume of circular materials and solutions we offer to 600 kilotons (kt) in Europe by 2025, and to 1.8 million kt globally by 2030.

### Maintain premium part performance.

Our circular solutions offer high purity standards and are compliant with industry standards with regard to odor, emissions, and fogging. They also consistently deliver when it comes to aesthetics, including paintability, light and dark color matching, Class-A surfaces, and more.

### Use less virgin material but still maintain lighter weight.

Lightweight and low-density materials used in a broad spectrum of mobility applications can be made even more sustainable by replacing virgin materials with grades from our Borcycle™ or Bornewables™ portfolios. Our circular solutions can substitute for virgin materials – both polyolefins and non-polyolefins – in any number of high-end automotive parts. In many instances, the foaming process can be used to reduce weight even further.

### Increase the amount of recycled content in automotive applications.

The transformative Borcycle technology is advancing thanks to our innovation expertise in combination with value chain collaboration. By working together, we are unlocking the potential of recycled material by increasing the percentage of post-consumer recycle (PCR) content by weight in applications while maintaining stringent performance requirements such as impact/stiffness balance as well as paintability and surface aesthetics.

### Facilitate easier recyclability of automotive applications.

Part of our vision for a circular economy of plastics entails the development of PP monomaterials which are more easily recycled, and produce higher quality recycle. Our innovation efforts are focused on design for recyclability and efficiency. Advanced testing facilities at our Innovation Headquarters in Linz, Austria, offer state-of-the-art modeling and simulation, and can assist you in testing the limits of circular materials.

# The Borealis Circular Cascade Model

Polyolefin plastic materials are versatile resources that should be reclaimed and reused. Because plastics are too valuable to ever be wasted, Borealis is committed to driving the transformation to a circular economy of plastics.

The **Borealis circular cascade model** depicts the diverse ways in which plastics can be kept in the loop: from renewable feedstocks to design for eco-efficiency; from design for recycling, to mechanical and chemical recycling – and then back to renewable feedstocks to close the circle. We use our polyolefins expertise to develop and implement innovative circular economy solutions with added value for our customers in all industry sectors, including mobility.

## Borcycle™ - Our technology for recycling polyolefin waste into new plastics

**Borcycle™** is one example of how we are accelerating towards circularity. This evolving technology uses recycling processes to transform polyolefins-based, post-consumer waste streams into new and value-adding solutions for demanding applications. **Borcycle™ M** grades are designed to fulfill the most stringent requirements, from stiffness/impact balance to processability, from paintability to good surface aesthetics. In short: our Borcycle™ M portfolio of mechanically recycled grades offers high material quality, but with a lower carbon footprint.

The virgin-level grades found in the **Borcycle™ C** family of chemically recycled solutions are fit for the most demanding applications, including food-contact and healthcare. Borcycle C grades are drop-in solutions and ISCC Plus certified. This means that the origins of these circular materials can be tracked and traced along the entire supply chain.

## The Bornewables™ - Premium polyolefin products manufactured with renewable feedstocks

The **Bornewables™** portfolio of circular polyolefin products is another way in which Borealis is providing its customers and partners ever more sustainable alternatives to fossil fuel-based polyolefins. Bornewables grades are made of renewable-based feedstock derived entirely from waste and residue streams such as used cooking and vegetable oil (and thus not in competition with the food chain). The ISCC PLUS accreditation of Bornewables grades is based on the mass balance method that allows the customer to track and quantify the effective renewable content at each manufacturing step. By using Bornewables grades, our customers can replace fossil fuel-based feedstock with an identical volume of sustainably sourced, renewable feedstock – without extra switching costs, and while maintaining the same high application quality.

# Borealis at a Glance

Borealis is one of the world's leading providers of advanced and sustainable polyolefin solutions and a European front-runner in polyolefins recycling. In Europe, we are a market leader in base chemicals and fertilizers. We leverage our polymers expertise and decades of experience to offer value adding, innovative and circular material solutions for key industries such as consumer products, energy, healthcare, infrastructure, and mobility.

### Worldwide

Operating on five continents in 120 countries, with head office in Vienna, Austria

### Key Financial Figures

In 2022, total sales of EUR 12,342 million and a net profit of EUR 1,396 million

### Market Position

Ranked 2nd among polyolefin producers in Europe and 8th worldwide

### Mechanical Recycling

Three polyolefin recycling locations in Europe

### Employees

Around 6900 employees (full-time equivalents)

### R&D

Record-breaking 133 priority patents filed in Austria in 2021

### Ownership Structure

OMV holds 75% and Mubadala, through its holding company, 25%

### Join Ventures

Borouge (with ADNOC, the Abu Dhabi National Oil Company, in Abu Dhabi, UAE) and Bayport Polymers (with TotalEnergies in Texas, US)

### Business Areas

Production and distribution of polyolefins, base chemicals, and fertilizers

In re-inventing essentials for sustainable living, we are building on our commitment to safety, our people, innovation and technology, and performance excellence. We are accelerating the transformation to a circular economy of polyolefins and expanding our geographical footprint to better serve our customers around the globe.

In affirming our aim to be a global leader in advanced and sustainable chemicals and material solutions, the Borealis Strategy 2030 puts sustainability at the core of all our current and future operations. We have set ambitious sustainability targets for our Polyolefins and Hydrocarbons businesses with regard to greenhouse gas emissions, energy use, flaring, and circular economy products and solutions. Borealis is exploring the use of carbon capture technologies for base chemicals production in Europe, and has also formed a partnership, C2PAT, with Lafarge, OMB and VERBUND to plan and construct a full-scale plant in Austria for carbon capture and processing.

As a responsible petrochemicals company, Borouge believes that achieving a zero-waste circular economy of plastics calls for strong and concerted action on the part of the industry, governments, consumers, and society. For more information on how Borouge is accelerating the transition to the circular economy, go to: [Borouge Sustainability Circular Economy](#).

**About Borealis** Borealis is one of the world's leading providers of advanced and circular polyolefin solutions and a European market leader in base chemicals, fertilizers and the mechanical recycling of plastics. We leverage our polymers expertise and decades of experience to offer value adding, innovative and circular material solutions for key industries. In re-inventing for more sustainable living, we build on our commitment to safety, our people and excellence as we accelerate the transformation to a circular economy and expand our geographical footprint.

With head offices in Vienna, Austria, Borealis employs 6,900 employees and operates in over 120 countries. In 2021, Borealis generated total sales and other income of EUR 10,153 million and a net profit of EUR 1,396 million. OMV, the Austria-based international oil and gas company, owns 75% of Borealis, while the remaining 25% is owned by a holding company of the Abu-Dhabi based Mubadala. We supply services and products to customers around the globe through Borealis and two important joint ventures: Borouge (with the Abu Dhabi National Oil Company, or ADNOC, based in UAE); and Baystar™ (with TotalEnergies, based in the US).
